

WOODEN ELECTRIC BIKE

We are students at School Centre Škofja Loka - Secondary school of mechanical engineering from Škofja Loka (Slovenia). We established a company for a school project named Woodcy. We made a wooden electric bicycle, which is one of the best on the market due to its design, quality and power. Our team consists of 6 students (Anže Kozjek, Jaka Primožič, Luka Jamnik, Luka Ušeničnik, Mark Gregorc, Tilen Šmid) and the mentor Tadej Debelak. Each of us had to fulfil specific tasks which had been agreed upon unanimously.

The school program in question is very interesting and encouraging since it is unique, it gives us feedback on how to run a company and be responsible at the time. Our wooden electric bicycle is eco –friendly, reliable, unique and made in Slovenia. It is very practical because the battery is hidden inside the frame and the motor inside the wheel. We decided to make it because we wanted to improve something we use every day, make it more fun and combine all of that with some useful technology.
